PROFESSIONAL EXPERIENCE

Product Developer

Vinetebrate | Jupiter, FL (remote) | April 2024 to Present

Develop new features as well as improve application performance as needed for both backend and frontend code.

- Work within a cross functional team to identify bugs and develop new features.
- Work with Twilio, SendGrid and Filevine APIs to develop new features.
- Suggest improvements to our products and technologies to better serve our customers.

Software Engineer

Updater | New York, NY (remote) | April 2022 to December 2023

Maintained and enhanced the MoveHQ SaaS application as part of a cross-functional agile scrum team to deliver new features and bug fixes in two-week sprints.

- Used Jira and GitHub to keep track of issues and code.
- Created code builds for QA and production through CI/CD pipeline.
- Developed features for both the backend PHP/Laravel application and frontend interfaces using jQuery and Vue.js.
- Used docker for local development and testing environments.

Senior Developer

PC Processing | Atlanta, GA | July 2021 to February 2022

Developed an application for the insurance industry, a managing general agent (MGA) in particular, to create detailed quotes for the different products offered.

- Used the Laravel PHP framework together with Vue.js to deliver a responsive and scalable application.

Web Developer and Security Analyst

Burke IT Consulting | Atlanta, GA | July 2019 to July 2021

Developed a web application for customers to view the results of the different security products offered by our company.

- Designed and developed a customer portal using Laravel, PHP, MySQL, Vue.js and Bootstrap.
- Used different chart libraries to create customer dashboards for our security product offerings.
- Designed an application and API for customers to check validity of their incoming calls using Twilio.

PHP Full Stack Developer

The Salvation Army Southern Territorial Headquarters | Atlanta, GA | July 2010 to June 2019

Developed national disaster services website (sal.army) and underlying applications for volunteer training & availability.

- Centralized information-sharing, data management and reporting for Emergency Disaster Services through the development of online Incident Management Suite for real-time resource allocation and service statistics.
- Delivered nationwide cost-savings through development of centralized ID badge printing through online volunteer database and the use of PHP GD library.

Education

Bachelor of Business Administration in Computer Information Systems, Georgia State University | Atlanta, GA Fall 2024
